## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election of 11, 13-16 in the reply filed on 4/25/2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. **Claims 11 and 13-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sayka et al (US 6766813) in view of Lyle O. Malotky (US 5120369).**

Sayka et al disclose an apparatus for removing contaminate particulate matter from a semiconductor wafer and disclose a support (Abstract and Fig 1), energy (acoustic wave) forming means to dislodge particulate matter (Col 3 lines 1-20) and means to remove particulate matter (Col 4 lines 45-57).

Sayka et al fail to disclose means for applying a sacrificial coating of a polymer, curing and removal of particulate matter with it.

Art Unit: 1763

Malotky discloses an apparatus for removing material from a surface by spraying a polymer in solution or suspension which cross links to a film which is removable by stripping (Abstract).

Therefore it would have been obvious for one of ordinary skill in the art at the time of invention to have used strippable polymer material to encapsulate dislodged particles from the substrate of Sayka et al in order to safely and completely remove contaminate particulate matter from the substrate.
